

Data Video Integrated System

Changing the Steel Industry

Be Anywhere. Know Everything. Fix Anything.

The Data Video Integrated System (DVIS) represents a ground-breaking advancement in the steelmaking industry, reshaping the evaluation of production processes while prioritizing enhanced safety measures and reduced operating costs.

By seamlessly combining the capabilities of a process historian and video recording system into one integrated solution, the DVIS fundamentally transforms the operational landscape for steelmakers.

Enhanced Safety

As the ultimate real-time information tool, the DVIS provides steelmakers with a comprehensive and uninterrupted view of the entire production process, bolstering safety protocols and mitigating potential risks. Its advanced monitoring capabilities enable swift identification of safety hazards, facilitating immediate intervention and minimizing safety incidents.

Cost Reduction

Not only does the DVIS fortify safety protocols, but it also serves as an exceptional resource for post-production evaluation, enabling in-depth analysis of events and production performance. This valuable insight aids in identifying areas for optimization and continuous improvement for you, your contractors and suppliers.

Training

Additionally, the DVIS functions as a comprehensive training tool, providing operators, management, research, and quality control personnel with invaluable knowledge and expertise.

DVIS

Making the making of steel, better.

The DVIS system collects process data from multiple sources, storing it in synchronized storage. Its intuitive interface efficiently distributes real-time and historical data to all users. The system actively monitors the data, generating automatic reports to keep everyone updated. Proactively monitoring the system, DVIS uncovers valuable insights and troubleshoots issues. It also distributes alarms, establishes Standard Operating Procedures (SOPs), and serves as a valuable training resource. DVIS facilitates troubleshooting, streamlines reclamation processes, and provides feedback to vendors. With DVIS, you can ensure safe, efficient operations and foster harmonious labor-management relationships. Rest easy knowing that your systems are under constant monitoring.

Success Stories

"Great tool for troubleshooting PLC programs enabling me to go back and see what happened to better understand events."

BOF MTE

"Improved troubleshooting capabilities, minimized downtime by being able to pinpoint problems and root causes quickly. Also, the ability to view historical trends to improve our process and performance."

Caster Electrical Manager

"Combined our signal historian and video recording systems into one Simplified management of signal and video recording. Reduced engineer time requirements for managing client software."
