

IMS1800TX

EAF Measuring System

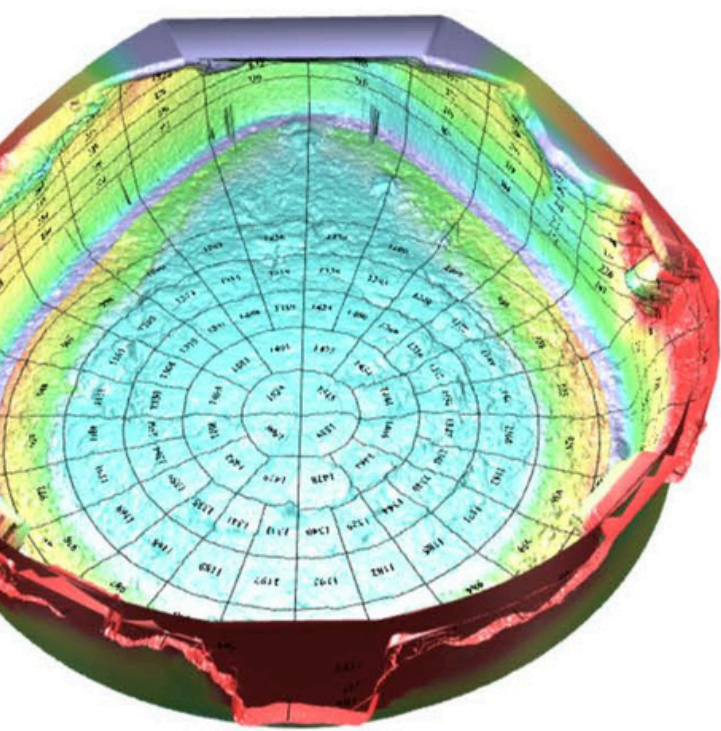

In the ever-evolving competitive world of steel production, forging ahead is imperative. Industrial Measuring Systems Inc. (IMSI) recognizes the challenges faced by steel plants and metal-producing facilities. Enter the trailblazing IMS1800TX laser scanner, a transformative solution that equips engineers and operating personnel with unprecedented control and decision-making capabilities.

Industrial Measuring Systems Inc

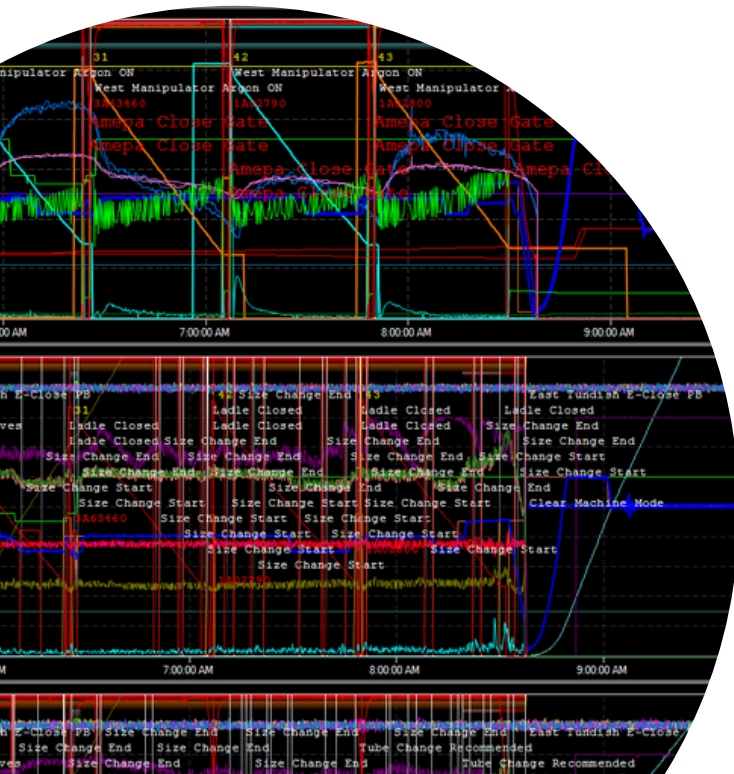

Precision

Advanced 3D measuring technology
 Measurement within 2mm thickness
 *700,000-1,000,000 data points per scan
 *20 seconds per scan
 Improved Decision-Making &
 Management Review

Customization & Flexibility

Customized to your mill
 Fixed, portable or combination
 integrates with equipment & mill
 networks

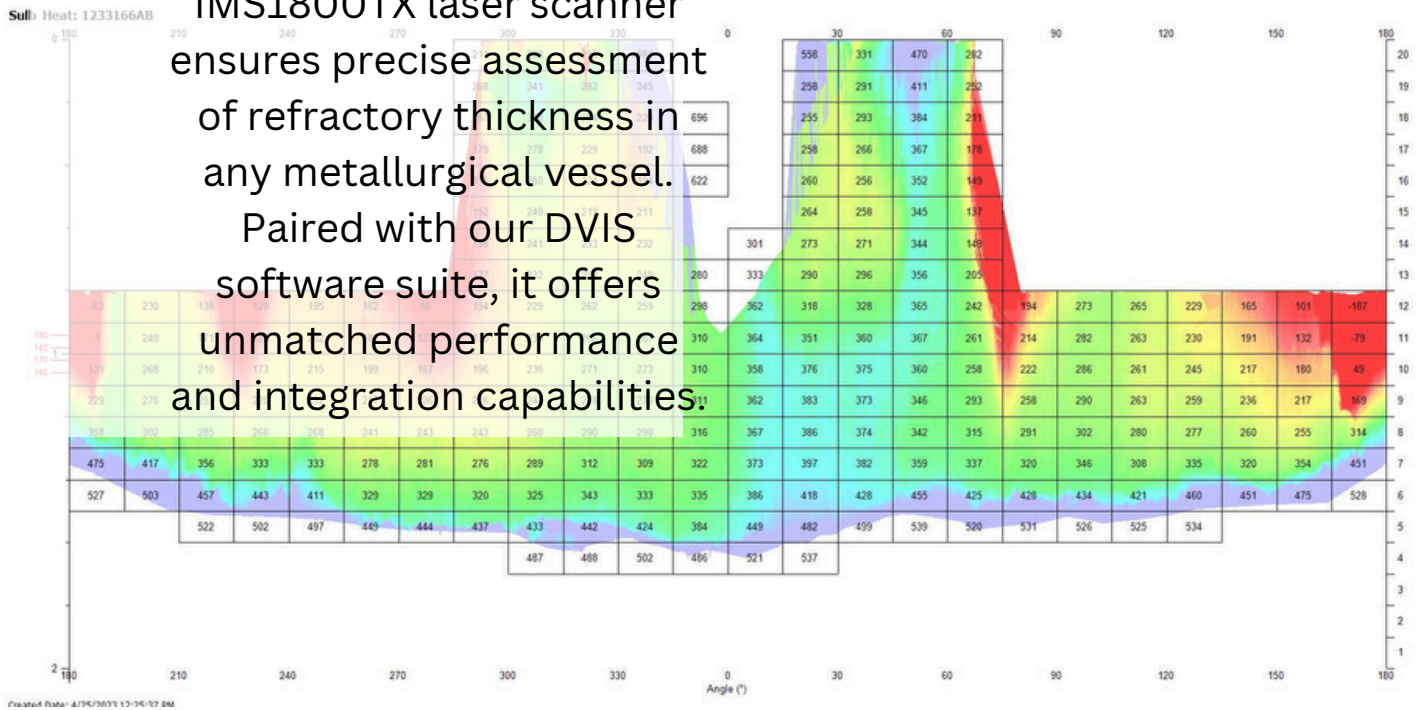

Safety

Send Automailer Alerts
 Automation reduces human error
 Automate furnace tilt,
 door opening & closing
 Use historical data for training
 Prevent overflow, accidents &
 damage

No longer rely solely on experience and visuals. The IMS1800TX laser scanner ensures precise assessment of refractory thickness in any metallurgical vessel.

Paired with our DVIS software suite, it offers unmatched performance and integration capabilities.

Our Data Video Integrated System (DVIS) collects process data from multiple sources, storing it in time-synchronized storage.

The system actively monitors data, generating automatic reports and alerts.

Proactively uncover insights, troubleshoot, distribute alarms, establish SOPs, and train your staff with DVIS. Ensure safe, efficient operations with constant system monitoring.

Precision. Safety. Customization.

There isn't another laser product on the market that can offer the customization of the IMS1800TX. Proprietary physical orientation methods ensure the most accurate readings.

Built for your mill, to produce the best product safely.
